

Introduction

The Folding Stand orients the fibersect to facilitate the cutting of fiber optic connectors attached to the ends of cables suspended over the workbench. The stand is normally folded under the fibersect but can be quickly deployed, tilting the fibersect to a fixed 30° angle as shown below. If the fibersect has the vacuum option, an elbow is slipped over the vacuum hose to bend it as shown.

Folding Stand Setup

If purchased as an option, the stand will be pre-installed and ready to use. It can also be purchased as a complete kit that is easily installed by following the included instructions.
